

Insulin management patterns in a province of southern Spain

(2014-2018)

n = 1.190.000 people

25.570
ITP

27.00
DHD

Prevalence of using insulin among general population (2018)

Total

<15 years

>75 years

Increasing use of long-acting insulin analogues

ITP

DHD

Insulin with NIADs

Therapeutic patterns (2018)

Basal

Basal + Prandial

Only 2/3 of ITP had a HbA1c test at least once a year.

Of them, 37% had HbA1c < 7% (53 mmol/mol).
